Energy policy

Energy efficiency is an important parameter for our company. We have set ourselves the explicit goal of reducing our specific energy consumption over the long term and of making ongoing improvements to our energy efficiency. We have introduced an energy management system in line with DIN EN ISO 50001 to help us achieve our strategic and operational energy goals. We are committed to correctly implementing all the requirements contained in this standard and to continuously improving the processes within our energy management system. We ensure:

- | that the requisite financial, HR, technical and structural conditions are in place
- | that relevant legal obligations and other requirements are taken into account and adhered to;
- | that the company's energy team is equipped with the skills they need to be able to carry out energy-related measures;
- | that our internal organisation for controlling and implementing energy-related aspects is continuously improved and that energy information is regularly collected and reviewed;
- | that the energy policy is documented and communicated across all levels of the company;
- | that information on adopting an energy-conscious approach is also passed on to service providers / external contractors;
- | that encouragement is given to procuring energy-efficient products and services that help improve our energy performance;
